

## 06 Handwritten

1. What's the purpose of the `\n` character?
2. We want to write two lines to a file called "hello.txt", "Hello" and "World". Complete this code to make that happen:

```
with open(           ,           ) as h:
```

3. Print out the contents of "hello.txt" by looping through each line
4. Print out the contents of "hello.txt" all at once

## 06 Handwritten Answers

1. What's the purpose of the `\n` character?

New line character.

2. We want to write two lines to a file called "hello.txt", "Hello" and "World". Complete this code to make that happen:

```
with open("hello.txt", "w") as h:  
    h.write("Hello\nWorld")
```

3. Print out the contents of "hello.txt" by looping through each line

```
with open("hello.txt", "r") as h:  
    for line in h:  
        print(line)
```

4. Print out the contents of "hello.txt" all at once

```
with open("hello.txt", "r") as h:  
    print(h.read())
```
